Euclidean Shortest Paths: Exact or Approximate Algorithms ...

The Euclidean shortest path (ESP) problem asks the question: what is the path of minimum length connecting two points in a 2- or 3-dimensional space? Variants of this industrially-significant computational geometry problem also require the path to pass through specified areas and avoid defined obstacles. This unique text/reference reviews Fajie Li and Reinhard Klette | Reinhard Klette: CCV Li (Huaqiao Univ., China) and Klette (Univ. of Auckland, New Zealand) have written an interesting and very reader-friendly book on algorithms that find a shortest path between two vertices of a graph. The notion of distance is the one in Euclidean geometry, and all problems considered are two- or three-dimensional. To this reviewer's knowledge, this is the first book-length treatment of the Fajie Li & Reinhard Klette: Euclidean Shortest Paths (PDF) ...
