Abstract: This paper establishes that output volatility and the size of output drops have declined across all countries over the past three decades, but remain considerably higher in developing countries than in industrial countries.

[Output Volatility and Large Output Drops in Emerging ...](#)

The favorable trends in output volatility and large output drops in developing countries are found to result from lower country-specific volatility and more benign country-specific events. Evidence from cross-section regressions over the 1970-2003 period suggest that discretionary fiscal spending volatility, and terms of trade volatility together with exchange rate flexibility are key determinants of volatility and large output drops.

OUTPUT VOLATILITY IN DEVELOPING COUNTRIES[1]

developing countries contributed to output volatility more than in developed countries? Bejan (2006) found that a higher level of trade openness leads to higher output volatility in developing countries, while the situation for developed countries is the exact opposite.
