#### System of polynomial equations - Wikipedia

A system of polynomial equations (sometimes simply a polynomial system) is a set of simultaneous equations  $f_1 = 0, \dots, f_h = 0$  where the  $f_i$  are polynomials in several variables, say  $x_1, \dots, x_n$ , over some field  $k$ .

#### Solving Polynomials - Math is Fun

Example:  $2x^3 + 27x + 2$ . The polynomial is degree 3, and could be difficult to solve. So let us plot it first. The curve crosses the x-axis at three points, and one of them might be at 2.

#### Solving Systems of Polynomial Equations - Geometric Tools

Systems of polynomial equations also arise regularly in computer graphics applications. For example, determining the intersection points of two circles in 2D is equivalent to solving two quadratic equations in
